Overview [Plans + Pricing](#) [Ratings + reviews](#)

Visualize hierarchical data through a series of concentric arcs, shows the part-to-whole proportion

Unlock Hidden Insights, Explore Outliers, And Visualize Multiple Categories with Feature-Rich Sunburst Chart by Powerviz

The Sunburst Chart by Powerviz is a fully dynamic and interactive visualization tool, designed to display hierarchical data in an intuitive format. With this chart, you can easily visualize **multiple columns in a hierarchy** and uncover valuable insights. The concentric circle design helps in displaying part-to-whole relationships.

Check out the live demo [here](#).

To access all pro features, click the gear "⚙️" icon in the top-right corner of the visual.

Key Feature Highlights:

- **Arc Customization** – Enables customization of arc shape, patterns, and formatting to create unique designs.
- **Color scheme** – Offers 30+ color palettes including color-blind safe mode for better accessibility.
- **Centre circle** – Design the inner circle with multiple layer options. Add text, icons, measure, and images.
- **Ranking** – Filter out Top/Bottom N by each level. Either hide or show remaining categories as "Others".
- **Conditional formatting** – Easily identify outliers based on measure or category rules.
- **Labels** – Add smart data labels that improve readability, and can be placed inside or outside the shape.
- **Annotations** – Creates multiple stories out of same visual. Add comments to allow users to collaborate and easily understand each node in depth.
- **Interactivity** – Fully interactive with features like zoom, drill down, cross-filtering, and tooltip are available to get more details.
- **Grid view** – Transforms the visual into an interactive table. Use pivot mode, filter, search, and sort capabilities for quick data scanning.
- **Show condition** – Show/hide the visual based on a condition.
- **Native Features** - Supports all native features including cross-filtering, interaction, selection, tooltip, bookmark, and context menu.

Key Feature Highlights:

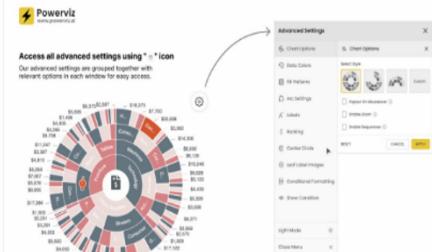

Business Use Cases:

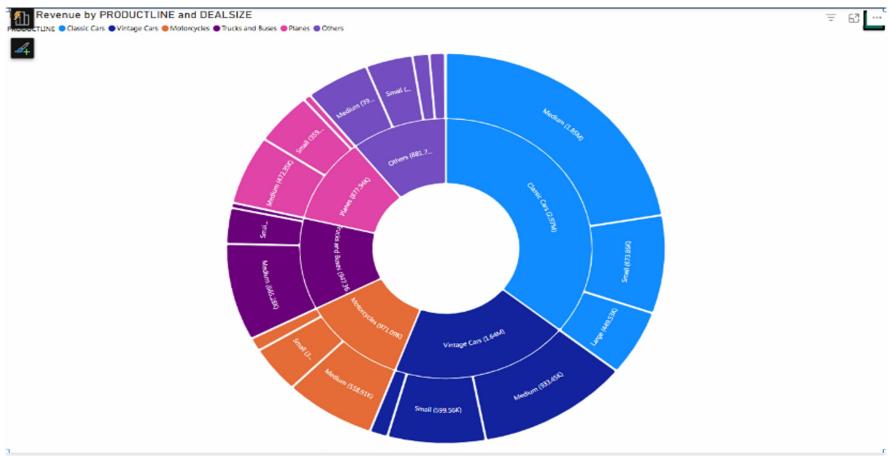

1. **Sales and Marketing** : Analyze market share or customer segmentation, to better understand the relationships between different categories and subcategories.
2. **Finance** : Used to analyze organizational structures, such as departmental budgets or expenditures, to identify trends, outliers, and potential areas for cost-saving.
3. **Operations** : Use for manufacturing processes or supply chain management, to identify areas of inefficiency or bottlenecks in the process.
4. **Education** : Display course structures and curriculums, allowing students and teachers to better understand the hierarchy and relationships between different subjects.
5. **Human Resources** : Analyze employee demographics, organizational structures, and performance data, allowing companies to better understand workforce trends and identify areas for improvement.
